### **INSTRUCTIONS FOR REPORTING STRANDED SEA TURTLES AND THE VIOLATION OF LAWS PROTECTING HAWAIIAN SEA TURTLES**

A stranded sea turtle is defined as any ocean turtle found dead, injured, sick, tumored, or otherwise abnormal and sometimes even normal in appearance and out of the water, usually along the shoreline. The turtle may also be in very shallow water close to shore. DLNR's Conservation Enforcement (DOCARE) is a point of contact to facilitate a response however DOCARE Officers do not normally pick up stranded turtles, unless there is a law enforcement violation.

To report a stranded sea turtle and facilitate a response, please page or call:

**Kihei area**  
**Pager 278-3775**  
 (NOAA Sanctuary personnel)

**All other Maui areas**  
**Pager 893-3172 or 893-3050**  
 (Marine Option Program – MCC)

**984-8110**  
 Maui DOCARE

Dial "0" for the operator and ask for "Enterprise 5469"  
 DOCARE State of Hawaii for after hours, weekends, and holidays.

For suspected law enforcement violations, such as killing, harming, or harassing a turtle please call the DOCARE numbers above or:

**800-853-1964**  
 Honolulu: 808-541-2727  
 Law Enforcement Branch  
 NOAA, National Marine Fisheries Service

For other Hawaiian Islands, please call the State of Hawaii DOCARE offices to facilitate a response:

**BIG ISLAND: 974-6208 (Hilo); 327-4961 (Kona); 887-6196 (Kamuela);**  
**MOLOKAI: 553-5190; LANAI: 565-7916; KAUAI: 274-3521;**  
**OAHU: 983-5730 NMFS Marine Turtle Research Program**

#### **Important points to keep in mind:**

- Sea turtles are listed and protected under the U.S. Endangered Species Act and wildlife laws of the State of Hawaii. All sea turtles, both dead and alive, are legally protected.
- These instructions apply exclusively to sea turtles. Please do not call 911 or any other private or government organizations.
- Due to the considerable travel distances that may be involved, and the possibility of other turtle strandings occurring at the same time, a delay in response of three hours or more may occur. Please be patient. There is no harm whatsoever for a sea turtle to be out of the water for many hours, provided it is not in direct hot sunlight. In fact, sea turtles strand because they want to and need to be out of the ocean.
- Callers should be prepared to tell exactly where the turtle is located, whether it appears to be dead or alive, and the size of the animal (estimated weight or length of shell - can one person lift it, or will two or more persons be needed?). Due to safety considerations, personnel may not travel at night to isolated unfamiliar areas.
- If the turtle returns to the water before someone arrives, this is not necessarily bad. Some turtles, even ones with tumors, want to rest ashore for a period of time and they may do this regularly (called basking).
